A SKILLTURE WORKSHOP · 2 HOURS · HANDS-ON

YOUR DEGREE IS NOT ENOUGH.

So you graduated. Now what?

From classroom to career: build skills, create value, get hired.

SKILLTURE
Where Ideas Find Their Way

@skillture.iq

The Reality Check

What university rewards vs. what the job market pays for.

UNIVERSITY REWARDS	THE JOB EXPECTS
— One correct answer	✓ Problems with no answer key
— Memorizing for the exam	✓ Finding, learning and applying fast
— Individual grades	✓ Shipping with a team
— A graduation project in a drawer	✓ Projects on GitHub with a live demo
— Theory and formulas	✓ Working systems people actually use

ASK THE ROOM Hands up: who has built something that no course required?

The Skills That Actually Get You Hired

Problem-solving
Break a messy problem into steps you can test.

Communication
Explain your work to a teammate, a client, a manager.

Practical experience
Projects, internships, freelance: anything real.

Technical skills
One stack, deep enough to build end to end.

Adaptability
Learn a new tool in a week, not a semester.

AI literacy
Use AI to move faster and still verify every output.

MINI-CHALLENGE Rate yourself 1–5 on each skill. Your lowest score is your next project.

Stop Collecting Certificates. Start Building Proof.

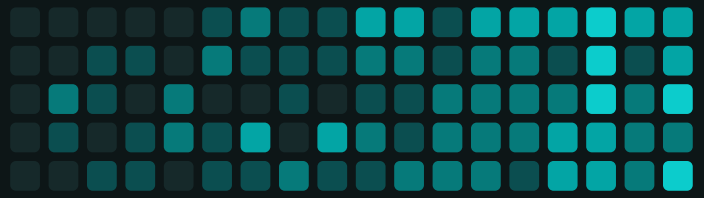

VS

ali-hassan / **generator-subscriptions** Public

Tracks monthly payments for a neighborhood generator. The owner sees who paid in one tap.

FastAPI · PostgreSQL · React · Deployed

Commit activity, last 18 weeks

- README with screenshots
- Live demo link
- Tests for core logic
- Decisions explained

CERTIFICATE

Says you attended.

Easy to collect. Hard for an employer to judge.

PROJECT

Shows you can build.

More ideas: clinic queue system · campus used-book marketplace

Your New Superpower: AI

Treat AI like a brilliant intern: fast, tireless, and sometimes confidently wrong.

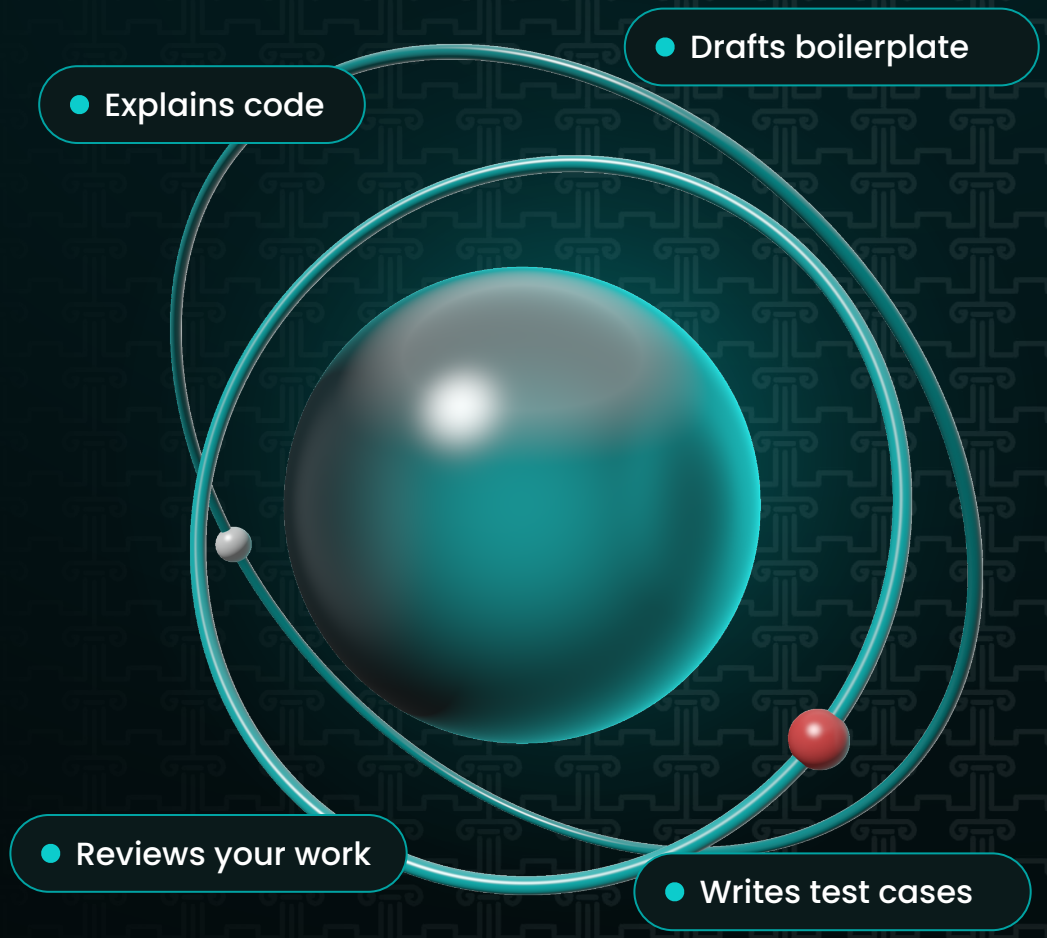

YOU **1 Frame the problem**
Context, constraints, an example of what good looks like.

AI **2 Draft**
Code, schema, test cases, explanations, options.

YOU **3 Verify**
Run it, test it, read every line you will ship.

YOU **4 Decide**
Accept, edit, or throw it away. You own the result.

LIVE DEMO Paste a real bug. Ask AI to explain it, then make it prove the fix with a test.

From Idea to Real Product

WHERE AI ASSISTS

Idea	Research	Database	Backend	API	UI / UX	Product
Brainstorm ideas and questions	Summarize the competition	Draft schema and seed data	Boilerplate and unit tests	API docs and example calls	Wireframes and UI copy	Deploy scripts and checklists

WHERE YOU DECIDE

Idea	Research	Database	Backend	API	UI / UX	Product
Is this problem worth solving?	Which sources are true?	Keys, relations, constraints	Business rules and security	Contracts and error handling	What users truly need	Correct? Ready to ship?

AI drafts. Engineers decide.

Ask: which step would you never fully hand to AI? Why?

The Modern Engineer's Toolkit

DESIGN

Figma

Design screens and prototypes before coding.

THINK

AI Assistants

Claude, ChatGPT: explain, plan, review, debug.

CODE

Cursor

AI code editor that understands your repo.

COLLABORATE

GitHub

Version control and your public portfolio.

BACKEND

FastAPI

Fast, typed Python APIs with automatic docs.

DATA

PostgreSQL

The relational database behind real products.

DATA

Supabase

Postgres plus auth and storage in minutes.

TEST

Postman

Send requests, test and document your API.

SHIP

Docker

Package your app to run the same everywhere.

DEPLOY

Vercel / Render

Put your app online with a public URL.

RULE OF THUMB Learn one tool per layer deeply. Tools change every year; fundamentals don't.

07 · LIVE CHALLENGE · 25 MINUTES

Let's Build Something

● BUILDING LIVE

STEP 0 · THE ROOM VOTES

A **Generator Subscription Tracker**
Who paid this month?

B **Clinic Queue System**
Book a slot, skip the wait.

C **Campus Lost & Found**
Post it, find it, claim it.

3 VOLUNTEERS

Driver types and runs the code

Navigator writes the prompts

Reviewer checks every output

01 3 min
Define
One user, one problem, three must-have features.

02 4 min
Model
AI drafts the tables. We fix keys and relations.

03 6 min
Generate
FastAPI + Supabase endpoints, written with AI.

04 5 min
Verify
Test in Postman. Find and fix one real bug.

05 4 min
Interface
One page: list subscribers, add one, mark paid.

06 3 min
Demo
Run it live. What would you build next?

EXPECTED OUTPUT IN 25 MINUTES

2 database tables
4 API endpoints
1 working web page
1 README + demo

Think Like an Engineer, Not a Prompt Writer

users.py · generated by AI in 4 seconds

SPOT 4 BUGS · 60s

```
1  @app.get("/users/{user_id}")                                  2
2  def get_user(user_id):
3      query = f"SELECT * FROM users WHERE id = {user_id}"       1
4      user = db.execute(query).fetchone()
5      return user                                               4 3
```

REVIEW FINDINGS

1. SQL injection: user input pasted straight into the query
2. No authentication: anyone can read any user
3. Leaks password_hash and private fields in the response
4. No 404: a missing user returns null, not an error

"It runs" is not the same as "it's right."

THE ENGINEER'S REVIEW

Architecture
Does it fit our structure, or is it a hack?

Logic
What happens with empty or weird input?

Security
Can a user reach data that isn't theirs?

Usability
Will a user understand what went wrong?

Correctness
Which test proves it works? Did I run it?

How to Actually Get Your First Technical Job

START

1

GitHub

Clean profile. Pin 3 repos with real READMEs.

2

Portfolio

2–3 projects that solve real problems.

3

CV

One page. Projects first. Links that work.

4

LinkedIn

Clear headline. Share what you build, weekly.

5

Networking

Meetups, hackathons, communities. Help first.

6

Internships

Apply early. Small startups count.

7

Interviews

Explain your own project's decisions out loud.

8

Applications

Tailor each one. Track them. Follow up.

Your Next 30 Days

Screenshot this. Start tomorrow.

WEEK 1 — Day 1–7

PICK

Choose your problem and your stack.

- [ ] Pick one real problem around you
- [ ] Choose one stack and stick to it
- [ ] Create the repo and a README plan

WEEK 2 — Day 8–14

BUILD

Make the core work.

- [ ] Design the database
- [ ] Build 3–4 API endpoints
- [ ] Commit every day you code

WEEK 3 — Day 15–21

SHIP

Put it online.

- [ ] Add a simple interface
- [ ] Test the core logic
- [ ] Deploy it with a public link

WEEK 4 — Day 22–30

SHOW

Let people see it.

- [ ] Polish the README with screenshots
- [ ] Post a short demo video
- [ ] Apply to 5 roles with this project

DAILY MINIMUM: 1 focused hour. **Share your progress and tag @skillture.iq**

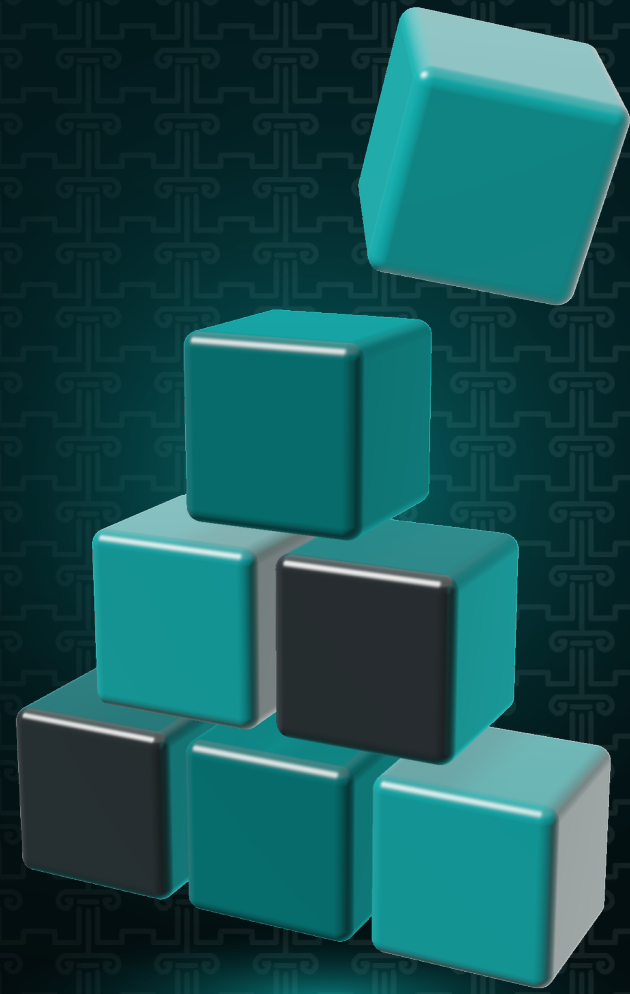

Your degree is what you earned.

Your future is what you build.

TONIGHT
Create your GitHub repo

THIS WEEK
Pick your real problem

IN 30 DAYS
Ship it. Share it.

SKILLTURE
